

SAMARTH SINGH

7455836285 | samarths.iitk@gmail.com | [LinkedIn](#) | [GitHub](#) | Delhi

A results-driven Data Analyst from IIT Kanpur with hands-on experience in business data analysis and reporting. Improved user engagement by 15% at a food-tech startup. Strong ability to turn raw data into actionable insights that support product and operational decisions.

Skills

Excel: Delivered KPI dashboards and business reports to support operational monitoring using Pivot Tables, XLOOKUP, and Power Query

SQL: Drove funnel analysis, KPI tracking, and reporting automation across real datasets using PostgreSQL, joins, CTEs, and aggregations

Python: Executed data cleaning, A/B testing, and ETL workflows to support experiment-driven product decisions using Pandas, NumPy and Matplotlib

Data Visualization: Built interactive dashboards and analytical reports to communicate findings using Tableau and Power BI

Experience & Projects

EthoCal – Intelligent Health & Nutrition Platform

Mar' 26 – May' 26

- Built a health analytics platform to track **5+ nutrition metrics** including calories, protein, carbs, fat, and fiber across meal logging and history systems
- Developed **daily, weekly, and monthly reporting workflows** to monitor calorie adherence, macro trends, and nutrition behavior patterns over time
- Designed EthoScore, a 100-point daily score that measures how closely users follow their calorie, macro, meal distribution, and logging goals

E-commerce Funnel & A/B Test Analysis

Jan' 26 - Feb' 26

- Identified a **44% conversion drop** between product views and add-to-cart actions through funnel analysis using Python and SQL, highlighting key optimization opportunities
- Evaluated A/B test performance using conversion analysis and statistical testing, identifying Variant A at ~18.8% conversion vs ~10.6% for Variant B

Gobite (Food Takeaway Startup), Kanpur Data Analyst Intern | PostgreSQL, Python

Feb' 23 – Aug' 23

- Improved **user engagement by 15%** by analyzing user and transaction datasets across 10+ KPIs using SQL and Python
- Reduced manual reporting effort by 20% and improved KPI monitoring efficiency by 35% by automating dashboards and reusable SQL reports
